A human neutral

```
The present sequence is that of human PHEX (a gene product of phosphate-regulating gene with homology to endopeptidase on X chromosome). Absence of a functioning PHEX gene is associated with 2C chromosome). Absence of a functioning PHEX gene is associated with 2C myophosphatemia. PHEX is a type II integral membrane glycoprotein. 2C was modified with a signal peptidase coding sequence (see ANY96188 CC and ANY96189). The soluble PHEX thus comprised the active ectodomain. 2C constructed by replacement of the 2C waline. Soluble and inactive mutant forms of PHEX can be used to creen ligands to PHEX. These ligands are used as substrates are used to treat phosphaturia and/or hypophosphatemia. A constructed for phosphaturia, an inhibitor 2C substrate for PHEX, or PHEX itself, can be used to treat phosphaturia and/or hypophosphatemia. A 2C hyperphosphatemia, including its most frequent manifestations, according to the constructions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The present sequence is encoded by the human PEX gene. The PEX gene spans the deleted region xp22.1 in x-linked hypophosphatemic rickets. The gene is mutated in non-deletion patients with the disorder. PEX is a cell membrane-associated protein with its active site in the extracellular compartment. The cells with the highest level of PEX expression are the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               osteoblasts. These cells are also the site of action of circulating parathyroid hormone (PTH). PTH stimulates these cells to produce factors which in turn stimulate other bone cells, specifically osteoclasts, to break down bone. Since pEX likely inactivates PTH in contact with osteoblasts, it results in decreased stimulation of osteoclasts and otherefore bone breakdown. Parathyroid hormone related peptide (PTHTP) therefore bone breakdown. Parathyroid hormone related peptide (PTHTP) may also serve as a substrate for PEX. PTH and PTHTP levels can be modulated using PEX. This regulates osteoblast activity, and can be used for the treatment and diagnosis of metabolic bone diseases which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  include osteomalacia, osteoporosis, osteopetrosis or Paget's disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 05-SEP-1996;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          04-SEP-1997;
                                                                                                                                                                                                                                                                                                                                protein a product of a phosphate regulating gene with homology to endopeptidases, suggesting that PEX might be a metalloendopeptidase. It was isolated from tumours causing oncogenous hypophosphataemia osteomalacia (OHO). Compounds which are targeted to inhibit PEX active site, identified in the method of the invention, are useful for the treatment of hyperphosphataemia or chronic renal failure. PEX can also be used as a target for the treatment of idiopathic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12-MAR-1998
                                                                                                                                                                                                                                                                                                                                                                                                                           This is the amino acid sequence of the recombinant human tumour PEX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding human PEX - useful for the treatment of hyper:phosphataemia or chronic renal failure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB; AAV23264.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Goltzman

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a murine neutral endopeptidase

Retallopeptidase-like enzyme, designated NL-1. The specification

also describes NL-2 and NL-3. The NL enzymes are used to test for

specific inhibitors. The N-terminal region of the enzymes can be used

to promote production and secretion of foreign proteins and active

chimperides, using chimeric constructs containing the foreign protein

chimperides, using chimeric constructs and may be useful in the

chimperides and in phase with the N-terminal region. The NL enzymes

chimperides and may be useful to disease, pain,

chimperides, and may be used to control fertility. They have

chimperides and ovaries, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

chimperides, and may be used to treat bone diseases,

                                                                                                         SNEPD or SNEPD control the proteins may all yearning control to state country of the state country of the state and care and genomic clones of SNEP homologues; cas research reagents and material for the discovery of treatments and disgnostics for animal and human diseases; and for chromosome country country of the state of identification. The SNEP proteins may be used as immunogens to compose the country chromatography. SNEP proteins may also be used in screening for compounds which modulate country country, and to assess enzymatic cleavage of small conclude substrates in cells, cell-free preparations, chemical libraries cand product mixtures. The SNEP proteins (as vaccine compositions), country chromatography. CC SNEP nucleotides, and SNEP activators or inhibitors may used concluded and chronic renal insufficiency, renal and hepatic country is careful to treat acute and chronic renal insufficiency, renal and hepatic country is careful to the careful and chronic renal insufficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              splice variant; alternative splicing; zinc endopeptidase family; splice variant; alternative splicing; zinc endopeptidase family; neuropeptide; peptide hormone; processing; metabolism; vaccine; drug screening; renal insufficiency; hepatic disease; ischaemia; pain; hypertension; cancer; inflammation; cardiovascular disease; neuronal disease; panoreatic disease; prostatic disease; respiratory disease; gene therapy; nephrotropic; vasotropic; analgesic; cerebroprotective; hypotensive; cytostatic; antiinflammatory;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB60562;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human neprilysin-like membrane metallopeptidase SNEPb

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the human SNEPa, SNEPb and SNEPc proteins, and the cDNAs encoding them. SNEPa, SNEPb and SNEPc are neprilysin-like membrane metallopeptidases and are the products of alternative splicing. The substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc endopeptidases play key roles in the processing and/or metabolism or neuropeptides and pertide hormones. NEPII is used to screen for specific substrates (used to detect NEPII in cells and tissues) or inhibitors, which can also be used to detect NEPII or for treatment of disorders related to peptidergic signalling in which NEPII in involved, e.g. cardiovascular or neurodegenerative diseases; growth disorders of endocrine origin, disturbances of the hypothalamic-hypophyseal axis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the rat membrane metalloprotease designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New membrane metalloprotease NEP II, involved in proteolysis of neuronal and hormonal peptides, used to screen for inhibitors,

AX

The invention relates to the human SNEPA, SNEPB and SNEPC proteins, and the cDNAs encoding them. SNEPA, SNEPB and SNEPC are neprilysin-like considered the control of the substrate(s) for the SNEP proteins are not as yet known, although the neprilysin family of zinc endopeptidases play key roles in the conclectides may be used as hybridisation probes for cDNA and genomic consists of isolate full-length oDNAs and genomic clones encoding SNEPA.

CC DNA; to isolate full-length oDNAs and genomic clones encoding SNEPA.

CC SNEPB or SNEPC; to isolate cDNA and genomic clones of SNEP homologues; SNEPB or SNEPC; to isolate cDNA and genomic clones of SNEP homologues; as research reagents and material for the discovery of treatments and conditional control of the discovery of treatments and continuation. The SNEP proteins may be used as immunogens to produce antibodies immunospecific for SNEPA, SNEPB or SNEPC. Such control of the discovery of treatments and control of the discovery of treatments and control of the snew proteins may be used as immunogens to produce antibodies immunospecific for SNEPA, SNEPB or SNEPC. Such considered the proteins of the snew proteins of the sn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neuropeptide; peptide hormone; processing; metabolism; vaccine; drug screening; renal insufficiency; hepatic disease; ischaemia; pain; hypertension; cancer; inflammation; cardiovascular disease; neuronal disease; pancreatic disease; prostatic disease; respiratory disease; gene therapy; nephrotropic; vasotropic; analgesic; cerebroprotective; hypotensive; cytostatic; antiinflammatory; cerebroprotective; hypotensive; cytostatic; antiinflammatory;

                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a human neutral endopeptidase metallopeptidase-like enzyme, designated NL-2. The specification also describes NL-1 and NL-3. The NL enzymes are used to test for specific inhibitors. The N-terminal region of the enzymes can be used to promote production and secretion of foreign proteins and active biopeptides, using chimeric constructs containing the foreign protein downstream from and in phase with the N-terminal region. The NL enzyme are have been localised to the brain, and may be useful in the treatment of neurological diseases such as Alzheimer's disease, pain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel neutral endopeptidase-like metallopeptidase polypeptides and polynucleotides, used to screen for related sequences and enzyme inhibitors, used for the treatment of NL-3 related bone disorders
                                                                                                                                                                                                                                                                                                                                                          and psychiatric disorders. NL enzymes have also been localised to the testis and ovaries, and may be used to control fertility. They have also been localised to bones, and may be used to treat bone diseases, and abnormal phosphate metabolisms related to improper peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 3; Fig 4; 59pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Q
                                                               especially male erectile dysfunction (MED). The NPY inhibitor may be used with an auxiliary active agent such as an SEP inhibitor. The invention provides an assay that can be used to detect candidate inhibitors of SEP. In addition to treatment of MED, NPY inhibitors can also be used to treat abnormal drink and food intake disorders, such as obesity, bulimia, anorexia and
                                                                                                                                                                                                                  associated with male genitalia, in the preparation of a medicament for the treatment or prevention of male sexual dysfunction, especially male erectile dysfunction (MED). The NPY inhibitor
                                                                                                                                                                                                                                                                                                   The present sequence is the protein sequence of human SEP, a soluble secreted endopeptidase. The invention relates to the us of an inhibitor of NPY, or an inhibitor of NPY Y1 receptor, especially an inhibitor selective for an NPY or NPY Y1 receptor.

The invention describes nucleic acids (I) encoding a novel human Maprilysin protease (II). (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate neprilysin protease expression e.g. by rectifying mutations or deletions in a patient's genome that affect the activity of the protease by expressing inactive proteins or to supplement the patients own production of the protease. (I) And its complementary sequences may also be used as similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) and (II) may be useful in the treatment of pain or pain associated disorders including tissue injury, chest pain, recomplex regional pain syndrome (CRPS), reflex sympathetic dystrophy and the protease of the protein associated disorders are accomplexed.
                               (RSD), tooth pain; headaches e.g. migrane, and pain associated with musculoskeletal disorders e.g. joint pain, surgery and inflammation e.g. irritable bowel syndrome. (II) may also be useful in the treatment of disorders including anaemia, infertility, aberrant spermatid cell activity, cell proliferation and/or differentiative disorders e.g. cancer and brain disorders e.g. cerebral edema, neurodegenerative diseases e.g. Alzheimer's disease, cerebrovascular disease, haematopoietic neoplastic disorders, immune disorders and erythroid associated disorders e.g. erythroblastosis. This is the amino acid sequence of the novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 5; Fig 1A-D; 123pp; English.

The anti-SEP antibody and the compound which inhibits or selectively inhibits the human SEP protein are useful in the manufacture of a medicament for the prophylaxis and/or treatment of sexual dysfunction, in particular male erectile dysfunction (MED) or female sexual dysfunction (FSD) (e.g. female sexual arousal disorder (FSD)). The SEP polypeptides are also useful for treating the above disorders and other disorders such as premature ejaculation, anorgasmia, sexual pain (e.g. vaginismus) and hypoactive sexual desire disorder. The present sequence is human SEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An isolated and/or purified nucleic acid encoding a human soluble secreted endopeptidase which is useful for treating sexual dysfunction, for e.g. male erectile dysfunction or female sexual dysfunction such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 4; Page 162; 167pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Harrow ID,

o
    pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                               1248.5

US-08-289-112-2

Sequence 2, Application US/08289112 Patent No. 5688640

GENERAL INFORMATION: APPLICANT: Yanagi

APPLICANT: Yanagisawa, Masashi TITLE OF INVENTION: Endothelin Converting Enzyme-1: A TITLE OF INVENTION: Membrane-Bound Metalloprotease That Catalyzes The TITLE OF INVENTION: Proteolytic Activation of Big Endothelin-1
